Laboratory Report

Introduction: This report package contains total of 8 pages divided into 3 sections:

Case Narrative	(2 pages) : An overview of the work performed at FGL.
Sample Results	(5 pages) : Results for each sample submitted.
Quality Control	(1 page) : Supporting Quality Control (QC) results.

Case Narrative

This Case Narrative pertains to the following samples:

Sample Description	Date Sampled	Date Received	FGL Lab ID #	Matrix
282 White Oak Way	06/27/2021	07/09/2021	SP 2109206-001	DW
3955 Indian Way	06/27/2021	07/09/2021	SP 2109206-002	DW
3928 Bluebird Lane	06/23/2021	07/09/2021	SP 2109206-003	DW
162 White Oak Way	06/23/2021	07/09/2021	SP 2109206-004	DW
3960 Indian Way	06/23/2021	07/09/2021	SP 2109206-005	DW

Sampling and Receipt Information: All samples were received in acceptable condition and within temperature requirements, unless noted on the Condition Upon Receipt (CUR) form. All samples arrived on ice. All samples were prepared and analyzed within the method specified hold time. All samples were checked for pH if acid or base preservation is required (except for VOAs). For details of sample receipt information, please see the attached Chain of Custody and Condition Upon Receipt Form.

Quality Control: All samples were prepared and analyzed according to the following tables:

Inorganic - Metals QC

,	200.8	07/12/2021:210603 All analysis quality controls are within established criteria.
		07/12/2021:207822 All preparation quality controls are within established criteria (performed at FGL-SP ELAP# 1573), except:
		The following note applies to Lead: 435 Sample matrix may be affecting this analyte. Data was accepted based on the LCS or CCV recovery.
L		435 Sample matrix may be affecting this analyte. Data was accepted based on the LCS or CCV recovery.

## Suggested Directions for Homeowner Collection Procedures for Lead and Copper Analysis

These samples are being collected to determine the lead and copper levels in your tap water. This sampling effort is required by the U.S. Environmental Protection Agency and your state, and is being accomplished through the cooperation of homeowners and residents.

A sample is to be collected after water has been sitting in the pipes for an extended period of time (i.e., no water use during this period). Due to this requirement, either early mornings or evenings upon returning from work are the best times for collecting samples. The collection procedure is described in more detail below.

1. Prior arrangements will be made with the Customer to coordinate the sample collection event. Dates will be set for sample kit delivery and pick-up by water department staff.

2. A minimum 6-hour period during which there is no water use throughout the house must be achieved prior to sampling. The water department recommends that either early mornings or evenings upon returning home from work are the best sampling times to ensure that the necessary stagnant water conditions exist.

3. A kitchen or bathroom cold-water faucet is to be used for sampling. Place the sample bottle (open) below the faucet and gently open the cold water tap. Fill the sample bottle to the line marked "1000 mL" and turn off the water.

4. Tightly cap the sample bottle and place in the sample kit provided. Please review the sample kit label at this time to ensure that all information contained on the label is correct.

5. IF ANY PLUMBING REPAIRS OR REPLACEMENT HAS BEEN DONE IN THE HOME SINCE THE PREVIOUS SAMPLING EVENT, NOTE THIS INFORMATION ON THE LABEL PROVIDED.

6. Place the sample kit outside of the residence in the location of the kit's delivery so that water department staff may pick up the sample kit.

7. Results from this monitoring effort will be provided to participating customers when reports are generated for the State, unless excessive lead and/or copper levels are found. In those cases, immediate notification will be provided (usually 10 working days from the time of sample collection).

## TO BE COMPLETED BY RESIDENT:

Water was last used: Time 11:05 pM Date 6/22/21

Sample was collected:

I have read the above directions and have taken a tap sample in accordance with these directions.

Time 7: 10 AM Date 6/23/21

## Suggested Directions for Homeowner Collection Procedures for Lead and Copper Analysis

These samples are being collected to determine the lead and copper levels in your tap water. This sampling effort is required by the U.S. Environmental Protection Agency and your state, and is being accomplished through the cooperation of homeowners and residents.

A sample is to be collected after water has been sitting in the pipes for an extended period of time (i.e., no water use during this period). Due to this requirement, either early mornings or evenings upon returning from work are the best times for collecting samples. The collection procedure is described in more detail below.

1. Prior arrangements will be made with the Customer to coordinate the sample collection event. Dates will be set for sample kit delivery and pick-up by water department staff.

2. A minimum 6-hour period during which there is no water use throughout the house must be achieved prior to sampling. The water department recommends that either early mornings or evenings upon returning home from work are the best sampling times to ensure that the necessary stagnant water conditions exist.

3. A kitchen or bathroom cold-water faucet is to be used for sampling. Place the sample bottle (open) below the faucet and gently open the cold water tap. Fill the sample bottle to the line marked "1000 mL" and turn off the water.

4. Tightly cap the sample bottle and place in the sample kit provided. Please review the sample kit label at this time to ensure that all information contained on the label is correct.

# 5. IF ANY PLUMBING REPAIRS OR REPLACEMENT HAS BEEN DONE IN THE HOME SINCE THE PREVIOUS SAMPLING EVENT, NOTE THIS INFORMATION ON THE LABEL PROVIDED.

6. Place the sample kit outside of the residence in the location of the kit's delivery so that water department staff may pick up the sample kit.

7. Results from this monitoring effort will be provided to participating customers when reports are generated for the State, unless excessive lead and/or copper levels are found. In those cases, immediate notification will be provided (usually 10 working days from the time of sample collection).

## Condition Upon Receipt (Attach to COC)

Sample Receipt at SP:							
1. Number of ice chests/packages received:	1						
2. Shipper tracking numbers							
3. Were samples received in a chilled condition? Temps:	OI /	7	/	/	/	/	/
4. Surface water (SWTR) bact samples: A sample that has should be flagged unless the time since sample collect		•	•	•		vhether ic	ced or not,
5. Do the number of bottles received agree with the COC?	/es	No	N/A				
6. Verify sample date, time, sampler	/es	No	N/A				
7. Were the samples received intact? (i.e. no broken Y bottles, leaks, etc.)	/es	No		_			
8. Were sample custody seals intact? Y	'es	No	N/A	]			
Sample Verification, Labeling and Distribution:							
1. Were all requested analyses understood and acceptable?	es	No					
2. Did bottle labels correspond with the client's ID's?	/es	No		_			
3. Were all bottles requiring sample preservation properly preserved? [Exception: Oil & Grease, VOA and CrVI verified in lab]	'es	No	N/A	] FGL			
4. VOAs checked for Headspace? Y	'es	No	N/A	]			
5. Were all analyses within holding times at time of receipt?	/es	No					
6. Have rush or project due dates been checked and <b>Y</b> accepted?	'es	No	N/A	]			
Include a copy of the COC for lab delivery. (Bacti. Inorgan	nics an	d Rad	dio)
